1. SDI fiber-optical video output expansion card and optical module installation steps

⚠️ Note:
Must be operated in the power-off status when installing the SDI fiber-optical video output expansion card and optical module.

1. Loose the screw (no need to unscrew it off) and pull it out in parallel.
2. Insert the SDI fiber-optical video output extension card into the slot in parallel.
3. Push it in parallel, then tighten the screws.
4. Insert the optical module into the SDI fiber-optical video output expansion card.
   - Optical module: single-mode 1,310nm,
   - Connector: duplex LC.
2. SDI fiber-optical video output extension card suitable for model

3. Optical module recommended model
   - BC-9-VC-SFPM
